SUMMARY

Full-stack developer with 4+ years shipping production software on C# / .NET and Angular for international clients, now Team Lead across two products while still coding daily. I find where people lose time, build the simplest thing that fixes it, and connect the systems so nobody retypes data. Replaced three tools and manual payroll with one platform synced to Xero in 2 months; cut a ten-year-old product's reports from 5–10 minutes to 5–10 seconds, unprompted, with every figure verified. Ship fast with AI coding tools while holding AI-written code to the same review and quality gates as my own; MCP integrations shipped in three client products.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL (T-SQL), Python

Backend: .NET 10 / .NET 8 / .NET Core, RESTful API design, Clean Architecture, modular monolith, Redis caching

Frontend: Angular (20 / 15 / 12), TypeScript, HTML5, CSS3, reusable component libraries, responsive UX

Integrations: Xero, Tanda, SweetProcess, Google Analytics, Searates, VesselFinder, client ERP and supplier systems, Google Gemini API, Azure AD B2C

Data: Microsoft SQL Server, query and stored-procedure optimisation, schema design, reporting, Excel import/export, verified data migrations

AI Engineering: Model Context Protocol (MCP), agentic coding (Claude) daily for 1+ year, LLM features in production, prompt design

Cloud, Quality & Process: Azure, Azure DevOps CI/CD, Git, pull-request workflows, SonarQube, ESLint, code review, written standards

Currently learning: Vue 3, PostgreSQL, e-commerce platform integrations

EXPERIENCE

iFour Technolab Pvt. Ltd. — Ahmedabad, India | February 2022 – Present

Approximately 100-person software services company building custom web and enterprise applications for international clients.

Team Lead | *August 2025 – Present*

- Lead a team of five across two concurrent products while staying hands-on in architecture, code review and delivery, from requirement to release.
- Work directly with clients and their operations teams to find the real problem behind a request; turn it into scoped, estimable tickets and ship in small steps.
- Define and document engineering standards (layered backend, reusable front-end layer, ESLint and SonarQube quality gates, commits linked to requirements) and mentor developers on them.
- Own the branching and pull-request workflow on Azure DevOps CI/CD and make cross-module technical decisions.
- Lead company-wide training on MCP and AI prompting; delivered MCP integrations into three client products as shipped, client-facing features.
- Recognised with the company's Client Excellence Award (2025) for delivery quality on PIQET.

Software Engineer | *August 2023 – July 2025*

- Delivered calculation-heavy features on PIQET, including Excel import/export and reliable PDF reports over complex life-cycle-assessment data.
- Integrated the Google Gemini API into Bistly for automated survey generation and AI-driven response analysis, an early production LLM feature.
- Recognised with the company's Rising Star Award (August 2024).

Junior Software Engineer | *August 2022 – July 2023*

- Built full-stack Angular and .NET features on live client products, including inventory and packaging modules for New Horizon ERP. Employee of the Quarter (January 2023).

Software Engineer Intern | *February 2022 – July 2022*

- Built .NET and SQL Server features on live client projects; Bright Beginner award during training; converted to a full-time role.

KEY PROJECTS

Health4Community (H4C) — Multi-Tenant Healthcare Operations Platform | *Team Lead, current*

.NET 10 · Angular 20 · Azure AD B2C · Azure DevOps · SQL Server · Xero API

- Replaced separate tools (Tanda for rosters, SweetProcess for procedures) and manual payroll with one platform, re-architected off legacy ASP.NET MVC and shipped in 2 months with AI-assisted development.
- Payroll: from entering each employee into Xero by hand with manual calculations to a two-step process that calculates pay automatically, imports everyone at once and sends invoice details in one click.
- Procedures: evidence is now requested automatically when a procedure is assigned, replacing email collection and manual checks by the operations manager.
- Workforce suite: one-click rostering, leave that updates the roster, timesheets with multi-level approvals synced to Xero, configurable overtime and award rules.
- Own the multi-tenant foundations: tenant isolation, fine-grained permissions, Azure AD B2C identity and per-tenant branding, keeping staff and payroll data separated.

PIQET — Packaging Life Cycle Assessment (LCA) Platform | *Team Lead, current*

Angular 15 · .NET Core 6 · SQL Server · Redis

- Cut report generation from 5–10 minutes to 5–10 seconds (about 60x) on a ten-year-old product used by many of Australia's largest companies; identified and delivered it without a client request.
- Moved deeply nested SQL stored procedures into the API layer as a single source of truth with Redis caching; ran old and new side by side and verified every figure before release.
- Integrated client ERP systems, packaging supplier software, Google Analytics, Searates and VesselFinder so data flows in without manual entry. Lead a team of 3 on the product.

Groundwork — Context and Guardrail Layer for AI Coding Agents | *3rd prize, iFour internal hackathon 2026*

Python 3.11 · Pydantic v2 · Typer · networkx · MCP · TypeScript and .NET analysers

- Cut the context an agent loads per task from about 25,000 tokens to 800–1,000 (about 95%), verified with a side-by-side test; plan / assess / validate loop flags each change's blast radius and escalates high-risk edits.

Bistly — Forms, Surveys and Audience Analytics | *Angular 12 · .NET Core 6 · SQL Server · Gemini API*

- Gemini-powered sign-up and survey generation with AI response analysis, configurable automation workflows and QR-code embedding.

CERTIFICATIONS AND RECOGNITION

- Microsoft Certified: Azure Fundamentals · Microsoft Certified: Azure Data Fundamentals
- iFour Technolab awards: Client Excellence (2025, PIQET) · Rising Star (August 2024) · Employee of the Quarter (January 2023) · Bright Beginner (training)
- 3rd prize, iFour Technolab internal hackathon 2026, for Groundwork · Hosted an Azure Fundamentals meetup at iFour Technolab

EDUCATION

B.E. Information Technology — Hasmukh Goswami College of Engineering | 2018 – 2022 | CGPA 7.67 / 10
