

DHRUV JAIN CURRICULUM VITAE

AHMEDABAD, INDIA • IST (UTC+5:30) OPEN TO REMOTE

I fix the things everyone else works around.

Four years of full-stack engineering, and
the work I am proudest of is the work
nobody asked me to do.

FULL-STACK SOFTWARE ENGINEER & TEAM LEAD — C# / .NET •
TYPESCRIPT • SQL SERVER

MEASURED RESULT • PIQET REPORT PIPELINE • 2025

5–10 min → **5–10 sec** 60× FASTER

A ten-year-old product. A calculation pipeline buried in nested stored procedures that three successive leads had built around rather than touched, because the numbers are what the customer acts on and the downside of breaking them was real. **There was no ticket for it.** I moved the calculation layer into the API behind a single source of truth, added Redis caching, and led a team of five on the product afterwards.

01 Experience

iFour Technolab Pvt. Ltd. — an approximately 100-person software services company in Ahmedabad building custom web and enterprise applications for international clients. Drag the scrubber to see what I was doing at any point.

Team Lead

Aug 2025 – present

iFour Technolab Pvt. Ltd. · Ahmedabad, India

- Lead a cross-functional team across two concurrent products while remaining hands-on — architecture, code review and feature delivery from requirement through release.
- Define and codify engineering standards: layered backend boundaries, a config-driven reusable front-end layer, ESLint and SonarQube quality gates — and mentor developers on them.
- Break product-owner requirements into scoped, estimable tickets and own the branching and pull-request workflow on Azure DevOps CI/CD.
- Lead company-wide training on **Model Context Protocol (MCP)** and AI prompting, upskilling engineers across teams on agentic development practices.
- Delivered MCP integrations into three separate client products as a shipped, client-facing capability, and apply agentic coding workflows daily — holding AI-generated code to the same review discipline as hand-written work.
- Own client relationships directly for the products I lead. Recognised with the company's **Client Excellence Award (2025)** for delivery quality on PIQET.

Software Engineer

Aug 2023 – Jul 2025

iFour Technolab Pvt. Ltd. · Ahmedabad, India

- Delivered calculation-heavy features on PIQET, including Excel import/export and robust PDF report generation over complex life-cycle-assessment computations.
- Integrated the Google Gemini API into Bistly for automated survey generation and AI-driven response analysis — an early production use of LLMs in a client product.
- Recognised with the company's **Rising Star Award** (August 2024).

Junior Software Engineer

Aug 2022 — Jul 2023

iFour Technolab Pvt. Ltd. · Ahmedabad, India

- Built full-stack Angular and .NET features on live client products, including inventory and packaging module enhancements for New Horizon ERP.
- Took assigned modules from specification through implementation, testing and release under senior review.

Software Engineer Intern

Feb 2022 — Jul 2022

iFour Technolab Pvt. Ltd. · Ahmedabad, India

- Built .NET and SQL Server features on live client projects, converting to a full-time engineering role on completion.

02 Selected work

Five products. Click any card to open it — or click a technology in the Skills section and these will filter to where I actually used it.

PIQET — packaging life cycle assessment

CLIENT EXCELLENCE 2025 >

Angular 15 · .NET Core 6 · SQL Server · Redis · Team Lead, current

REPORT TIME

5-10 min → 5-10 s

SPEED-UP

×60

TEAM

5 engineers

REQUESTED BY

nobody

A tool that assesses the environmental impact and resource use of packaging options. Report generation took **5–10 minutes** on a pipeline that had run unchanged for three years inside a ten-year-old product.

The calculations lived in large, deeply nested SQL stored procedures that successive leads had worked around rather than touched. I moved them into the API layer behind a single source of truth and added Redis caching, using AI-assisted refactoring to make a change of that scope feasible for one developer. Reports now return in **5–10 seconds** — roughly 60× faster. I identified the opportunity and delivered it proactively, without a client request, and lead a team of five on the product.

Health4Community — multi-tenant healthcare SaaS

.NET 10 · Angular 20 · Azure AD B2C · SQL Server · Team Lead, current

LEGACY REWRITE

2 months

STACK

.NET 10 · Angular 20

MODEL

multi-tenant SaaS

An enterprise multi-tenant platform for healthcare and clinic organisations spanning HR and workforce management, process and compliance, and business administration.

I re-architected the product off a legacy ASP.NET MVC codebase onto a modern stack and **shipped the new version in two months**, using AI-assisted development throughout. I own the multi-tenant foundations — fine-grained permissions, tenant isolation, Azure AD B2C identity, per-tenant branding — and the workforce suite: attendance, timesheets with multi-level approvals, leave, rostering, and configurable overtime and award loading. I designed those modules around real operational edge cases rather than the happy path, so later requirements fit the model instead of forcing rework.

Groundwork — guardrails for AI coding agents

Python 3.11 · Pydantic v2 · networkx · Model Context Protocol

3RD PRIZE, HACKATHON 2026

AGENT CONTEXT

25,000 → 800-1,000 tok

REDUCTION

95%

VERIFIED BY

side-by-side test

A deterministic context layer that lets AI coding agents make scoped, low-risk changes across large repositories instead of searching the whole codebase. It cut the context an agent loads per task from roughly **25,000 tokens to 800–1,000** — about 95% — verified with a side-by-side comparison test.

A plan / assess / validate guardrail loop computes each change's blast radius from a dependency graph and auto-escalates high-risk edits. It is model-agnostic and never calls an LLM itself, so any coding agent can consume it through its MCP server or CLI. *There is a playable version of that idea below.*

Bistly — forms, surveys and audience analytics

Angular 12 · .NET Core 6 · SQL Server · Google Gemini API

A platform for businesses to create and manage sign-up forms, surveys, promotions and audience analytics. I integrated the Google Gemini API for automated sign-up and survey generation plus AI-driven response analysis, alongside configurable automation workflows and QR-code embedding.

New Horizon ERP — manufacturing operations

Angular 12 · .NET Core 2.1 · SQL Server

An ERP covering inventory, production, quality control, planning, finance and CRM. I developed and configured enhancements to the inventory and packaging modules to streamline operations — useful context for any product that has to exchange data with an ERP.

03 Playground

Two of the things above, made pokeable. Reading about a rewrite is not the same as feeling the difference.

04 Technical

Click any technology and I will show you exactly where I used it. What I have shipped in production and what I am currently learning are kept apart on purpose.

LANGUAGES

AI ENGINEERING

QUALITY

LEARNING NOW

You will not find percentage bars here. I have never been able to say what "C# — 87%" would mean, and neither has anyone who has shown me one. The two items in amber are things I am learning on my own time and would not claim as production experience.

Education

B.E. Information Technology
Hasmukh Goswami College of Engineering
2018 – 2022 · CGPA 7.67 / 10

Certifications & recognition

- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Azure Data Fundamentals
- Client Excellence Award, 2025
- Rising Star Award, August 2024
- Employee of the Quarter, January 2023
- 3rd prize, internal hackathon 2026

05 How to hire me

The practical questions a hiring manager actually needs answered before they can say yes. No coyness — if something here does not work for you, it is better that we both know in week one rather than week six.

WHERE I AM

Ahmedabad, India — India Standard Time, UTC+5:30, no daylight saving.
I work fully remote and have done so with international clients throughout my career.

WORKING HOURS	My usual day is 10:00 – 19:00 IST , and I flex outside it for distributed teams — stand-ups, launches and incidents included. Use the calculator below to see exactly where that lands for you.
ENGAGEMENT	Open to full-time employment or a contract engagement , whichever fits how your company hires internationally. I have no preference; tell me what is simplest on your side.
WORK AUTHORISATION	ASK ME This depends on where the role sits and whether it is remote or on-site — worth a direct question in the first call rather than an assumption on a web page. I will give you a straight answer.
AVAILABILITY	ASK ME I am currently Team Lead on two live products, so I would leave properly rather than abruptly. Ask me for my current notice period and I will tell you exactly.
COMPENSATION	Tell me your band first and I will tell you honestly whether it works. I am more interested in the problem and the team than in squeezing the number, but I am not going to pretend money is irrelevant either.
HOW TO EVALUATE ME	Give me a real problem from your codebase — a slow endpoint, a gnarly migration, a bug nobody has had time for — instead of a syntax quiz. That is the format where you will learn the most about how I actually work, and it is the format I am at my best in.
WHAT I AM LOOKING FOR	A product with real users whose day depends on it, a team that writes things down, and enough ownership to fix the thing I can see is broken. I would rather go deep on one product than touch ten.

Fastest way to start

Email me at it.dhruvjain@gmail.com with a sentence about the problem you are trying to solve. I will reply with whether I think I am the right person — including when I think I am not.

One thing worth knowing

I am stronger on how systems actually behave than on textbook terminology. If your interview leans hard on reciting definitions, you will get a

worse read on me than if you put me in front of
running code.
